AutoCAD Architecture Software Is AutoCAD for Architects

Gain immediate productivity and smooth collaboration within a software environment you already know.

Immediate Productivity

If you are an architect who knows AutoCAD® software, you can start using AutoCAD® Architecture software with minimal training to create drawings, documentation, and schedules faster. Purpose built with architects in mind, AutoCAD Architecture automates tedious drafting tasks to help reduce errors and increase efficiency. As you work, you can discover new and useful features at your own pace.

Smooth Collaboration

Easily share designs and project information with clients and members of your extended project team. Use integrated rendering tools to create contextualized design visualizations for clear client communication and accelerated approvals. Rely on industry-leading DWG™ technology to exchange information with colleagues. Expedite project review cycles by publishing files directly to DWF™ or DWFx formats. And exchange files with mechanical, electrical, and plumbing engineers and structural engineers who use other AutoCAD-based programs.

Key Features in AutoCAD Architecture

Streamlined Design Environment

AutoCAD Architecture features a streamlined user interface. Find your favorite tools and commands faster, locate lesser-used tools more efficiently, and discover relevant new features more easily. The result is less time searching through menus and toolbars, and more time getting your work done.

Details

AutoCAD Architecture software includes a comprehensive library of detail components and keynoting tools. Rather than spend time and effort on often tedious documentation and design annotations, you can fully automate the creation of details to ensure appropriate, consistent annotations. When you are ready, you can generate keynote legends quickly and easily.

Walls, Doors, and Windows

Draw and document typical building elements such as walls, doors, and windows. Draw wall layouts that reflect actual construction. Modify walls and their endcap conditions on a component level for improved handling of common wall conditions, such as angled, cornered, or intersecting fire-rated walls. Automatically insert and place doors or windows with complete placement control. Move any wall, and all connected walls and spaces automatically update. Use familiar AutoCAD® commands such as Fillet and Chamfer.

Spaces

Automatically tag every room in a drawing, complete with room areas. As room boundaries change, you can easily update spaces, causing tags and areas to refresh, maintaining accurate documentation.

Sections and Elevations

Generate 2D sections and elevations with material hatching, directly from your floor plans. If your design changes, fully updated section and elevation graphics are generated, maintaining layer, color, linetype, and other properties.

The Power to Be Productive

Get all the functionality of AutoCAD software, plus tools designed specifically for architectural drawing, design, collaboration, and documentation.

Scheduling

Whether you are customizing the appearance of out-of-the-box schedule styles to meet company standards or creating new schedules from scratch, complete with required calculations, you can do so with ease. Since schedules are linked directly to your designs, you can update them to reflect any design changes at the click of a button.

DOOR AND FRAME SCHEDULE

1	1	36x80	1 1/2"	WOOD
2	2	36x80	1 1/2"	WOOD
3	3	36x80	1 1/2"	WOOD
4	4	36x80	1 1/2"	WOOD
5	5	36x80	1 1/2"	WOOD
6	6	36x80	1 1/2"	WOOD
7	7	36x80	1 1/2"	WOOD
8	8	36x80	1 1/2"	WOOD

Rendering

Bring designs to life for client presentations at any stage of the design with integrated rendering. The streamlined visualization capabilities are fully integrated into the AutoCAD Architecture workflow. Make your presentations stand out by visually communicating richer design information.

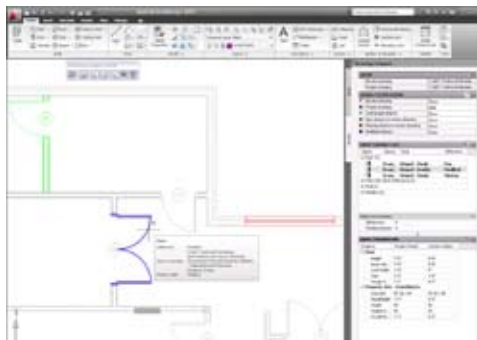

Dimensioning

With even greater flexibility in AutoCAD Architecture, you can now dimension any wall—and all its components, including wall stud centerlines and faces—according to your own dimensioning standards. And since the dimensions are associative, they automatically update as your designs change, eliminating the tedium of many manual updates.

Drawing Compare

The Drawing Compare feature enhances collaboration by using color-coded displays to show items on a drawing that have been changed, added, or deleted by other members of the design team. Changes to items such as styles, fire ratings, or other nongraphical properties are also tracked. Combined with redlining features, such as revision clouds, Drawing Compare helps clarify communication across the design team.

AutoCAD® Revit® Architecture Suite— For Maximum Flexibility

and Advantage

Combining AutoCAD, AutoCAD Architecture, and Autodesk® Revit® Architecture software applications into a single, comprehensive package, this AutoCAD®

Revit® Architecture Suite software allows you to transition to building information modeling (BIM), while protecting your legacy software, training, and design data investments. Purpose built for BIM, Autodesk Revit Architecture delivers a powerful competitive advantage by speeding creative design work, facilitating analysis for sustainable design, and automatically delivering coordinated, consistent documentation. Support ongoing work in either AutoCAD or AutoCAD Architecture while you make the switch to BIM with Autodesk Revit Architecture, at your own pace.

AutoCAD Architecture Success Story Whitney Architects, Inc.

Since 1984, interior architecture firm Whitney Architects has delivered a broad range of technical and design services for large corporations, financial services firms, and hospitality providers. Whitney adopted AutoCAD Architecture software to better provide this diverse blend of services and to foster improved collaboration.

Before moving to AutoCAD Architecture, Whitney experienced difficulty sharing files with consultants, and required a great deal of support from their previous CAD vendor. Additionally, says Stephen Bures, president of Whitney Architects, "We consistently ran into trouble training new employees. They were familiar with AutoCAD, but none of them knew our previous CAD application, resulting in a steep learning curve and increased costs. That was a big part of our decision to make the switch."

Since adopting the software, Whitney has completed almost 600 major construction projects more productively and accurately than possible with their previous CAD software. "Right out of the box," says Bures, "AutoCAD Architecture helped us save roughly 35 percent in time spent on drawings."

Collaboration with mechanical, electrical, and plumbing engineers as well as structural engineers and other consultants has improved significantly, too. According to Bures, "Our drawings are much better with AutoCAD Architecture, not only because the quality control process is easier, but also because the interface with all of our consultants and clients is easier and more exact. As a result, we save time on projects."
